## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on July 25<sup>th</sup>, 2003 has been entered.

### ***Claim Objections***

2. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claim 1 has been renumbered as claim 59.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 5-7 and 59 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claim 59 recites that the barn is modified so as to "permit correlation of the tobacco specific nitrosamine content of said cured tobacco with the actual level of nitric oxides"; however, it is not clear how a barn can be modified to "permit" a correlation. The Examiner believes that a particular correlation (i.e. nitric oxide exposure vs. nitrosamine content) exists whether the barn is modified or not. It appears as if Applicant intends to say that the barn is modified in such a way that the formation of nitrosamines on tobacco is prevented due to the suppression of nitric oxide levels in the barn during curing. If this is the case, the Examiner suggests the following claim language:

"59 (Amended). A method for modifying a tobacco curing barn provided with a direct fire heating unit for the purpose of providing conditions suitable for curing tobacco such that resulting cured tobacco obtained from said barn possesses a tobacco-specific nitrosamine content lower than 2 parts per million, the method comprising:

removing the direct fire heating unit from the tobacco barn,

providing the tobacco barn with a heating unit that does not generate exhaust gases comprising nitric oxides in a fashion that would cause contact between said nitric oxides and said tobacco within said barn, and further modifying said barn to ensure that the nitric oxide level within the barn during tobacco curing is suppressed to prevent formation of tobacco-specific nitrosamines [permit correlation of the tobacco-specific nitrosamine content of said cured tobacco with the actual level of nitric oxides to which said tobacco is exposed in said barn, wherein said barn as modified may be used for the curing of tobacco leaves].

This language is fully supported by the instant specification on page 3, lines 30-34 and page 9, lines 31-32.
